Junior Programmer for Front End Web Development \ \ \times DECT-KS

Project guideline and methodology

Prepared by—Raymond D. Neoh

Out come

We are laying out the guideline and methodology of the front end Web development project.

The project should include all the elements taught in the course, as illustrated in here.

Deployment Low codes Design Concept Frameworks Control UI/UX Collaboration Underlying Front End Technology framework

The project planning phrase

The project selected for the final project should included the followings elements, they are:

- 1. The design concept
- 2. UML layout of the project
- 3. User flow
- 4. Sequence diagram
- 5. Products requirement
- 6. User story
- 7. Files Lists
- 8. Architecture
- 9. A development schedule using SCRUM
- 10. Technical Document
- 11. IDE-VB Code, Pycharm, etc.
- 12. GIT/GITHub —version control
- 13. Project UI/UX

- 14. Graphic tools—GIMP,Inkscape, Openshots
- 15. Communication Tools--Libreoffice
- 16. HTML
- 17. Javascript
- 18. CSS
- 19. Bootstrap
- 20. React elements
- 21. Simple API
- 22. Use of low code tools, such as:
 - i. Budibase
 - ii. WIX
 - iii. Any other low code platform of your choice.
- 20. Deployment on AWS, Digital Ocean or any web hosting platform you selected.

The project require the followings, they are:

- 1. Design and construct a web application of e-banking.
- 2. Desktop icon
- 3. Mobile Interface for phone and tablet.
- 4. The Web page will simulate banking transaction, that included the followings, such as:
 - i. Log-in with user validation
 - ii. Lost or change passwords.
 - iii. Transaction Manu
 - iv. Simulate transcation, etc..

The project require the followings, they are:

- 1. Design and construct a web application of e-commerce website
- 2. Desktop icon
- 3. Mobile Interface for phone and tablet.
- 4. The Web page will simulate banking transaction, that included the followings, such as:
 - i. Log-in with user validation
 - ii. Lost or change passwords.
 - iii. Transaction Manu
 - iv. Simulate transaction, etc..

Any web front end project that have this functions and more, they are:

- 1. Design and construct a web application of e-commerce website
- 2. Desktop icon
- 3. Mobile Interface for phone and tablet.
- 4. The Web page will simulate banking transaction, that included the followings, such as:
 - i. Log-in with user validation
 - ii. Lost or change passwords.
 - iii. Transaction Manu
 - iv. Simulate transaction, etc..
